Skills

- Html Css Javascript And Full stack development

Projects

- Apartment visitors portal**
An apartment visitor portal is an online platform or application that allows residents to manage and register guests electronically. It typically enables residents to input visitor information, including names, contact details, and expected arrival times. This system provides a convenient way for residents to notify building management of guests and streamline the visitor check-in process. Additionally, some portals may offer features such as access control, guest passes generation, and notifications to residents upon guest arrival. Overall, the visitor portal enhances security, efficiency, and convenience for both residents and building management.

Achievements & Awards

- Cloud computing course completed in online npTEL with 61 percentage
- Cloud computing course completed in SimpleLearn with one day certification

Interests

- Learning new things
